

Infusions & **BEYOND**

Everything you need to know to get started!

Weight Loss

Semaglutide

Aprescription medication originally developed to treat type 2 diabetes, now widely used for medical weight loss. It mimics a natural hormone (**GLP-1**) that helps regulate blood sugar, slow digestion, and reduce appetite. When combined with lifestyle changes, **GLP-1** can lead to significant and sustained weight loss.

Pricing is individualized
per medication type
and dosing.

Peptides

Tirzepatide

A prescription medication used for type 2 diabetes and medical weight loss. It works by mimicking two hormones (**GLP-1 and GIP**) that help regulate blood sugar, curb appetite, and enhance feelings of fullness. **GLP-1 and GIP** has shown impressive results in supporting sustained weight loss, with less side effects, when combined with diet and exercise.

INJECTION ONLY
